Cam3000 & Combi dowel

Improved customer assembly experience and a consistently strong joint

The latest generation Titus Cam3000 with Combi dowel ensure secure and easy to use fixing for RTA (ready to assemble) furniture panels. It provides the solid construction that is at the heart of well-designed and quality furniture

Cam3000 has been available in the market for over a year and has been recognised for improving the customer assembly experience with its smooth and reliable tightening action provided by the innovative cam profile. In common with all Titus cams, Cam3000 always locks at 230° (2 o'clock) assuring greater dowel pull-up, enhanced reliability of closing and a consistently strong joint. It incorporates the Klix anti-rotation feature with interlocking teeth providing a strong, vibration proof joint. A further important feature of the Cam 3000 is the cam-retaining pips that hold it in position prior to assembly. This facilitates factory insertion as well as ensuring easier mounting.

Cam3000 can be used with the technically advanced Combi dowel that combines steel and a minimum of zinc material to ensure high precision, dimensional accuracy and greater resistance to torsion and pull-out. The depth-stop collar ensures accurate insertion preventing the cam tightening problems that can result from over-insertion. The torroidal dowel head form transfers the forces between cam and dowel more effectively, resulting in a small cam bursting force that improves the rigidity of the connection.

The Cam3000 and Combi dowel combination fits perfectly with the Titus brand mission "to provide customers with products that improve quality of furniture while facilitating home assembly" and contributes to greater consumer satisfaction for ready-to-assemble furniture.
