Cold Environment Damping

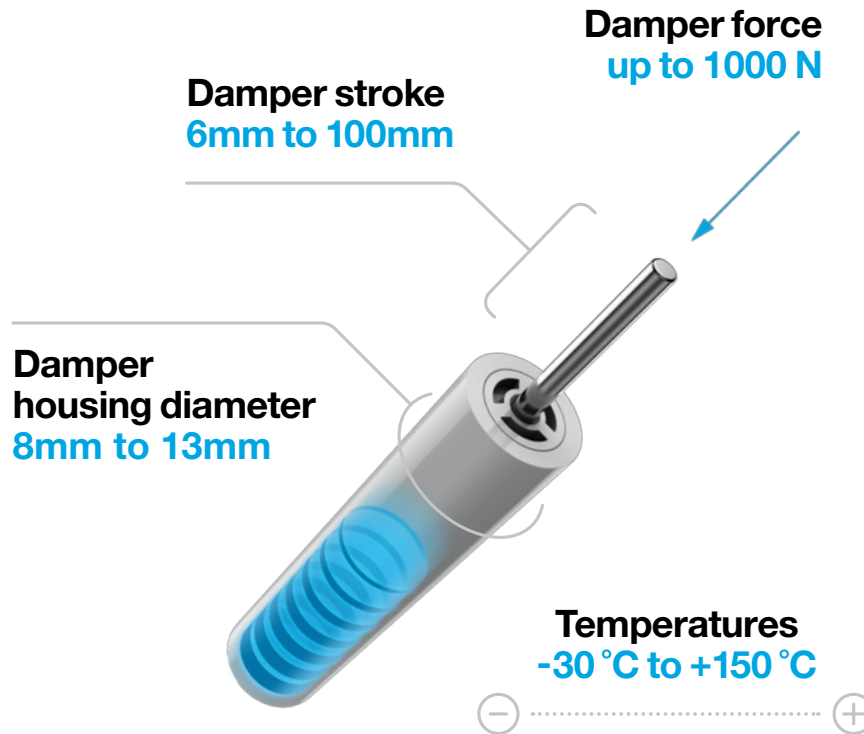

Reliable soft closing performance in environments
with temperatures down to -30°C

Custom-built solutions for damping in cold environments

- Effective performance across a temperature range from -30°C to $+40^{\circ}\text{C}$
- Consistent damping force, even at the lower temperature limit
- Modular design enables fine-tuning of damping force, damping characteristics, and stroke according to customer requirements
- For home and commercial freezers, refrigerators, refrigerator drawers, wine coolers, and applications in the automotive and aircraft industry

Titus hydraulic damping technology

Multi-purpose damping technology for high-volume applications:

- **Consistent damping performance** throughout the product life-time, across a wide range of applications
- **Fully controllable damping curve** enables precise tuning of performance to specific application requirements
- **Cold/hot environment friendly:** efficient performance in an extended temperature range
- **Modular design** enables quick customisation
