PushTrio

Three-in-one: Push opening, soft opening
and soft closing for pocket doors

Fully retractable pocket sliding doors

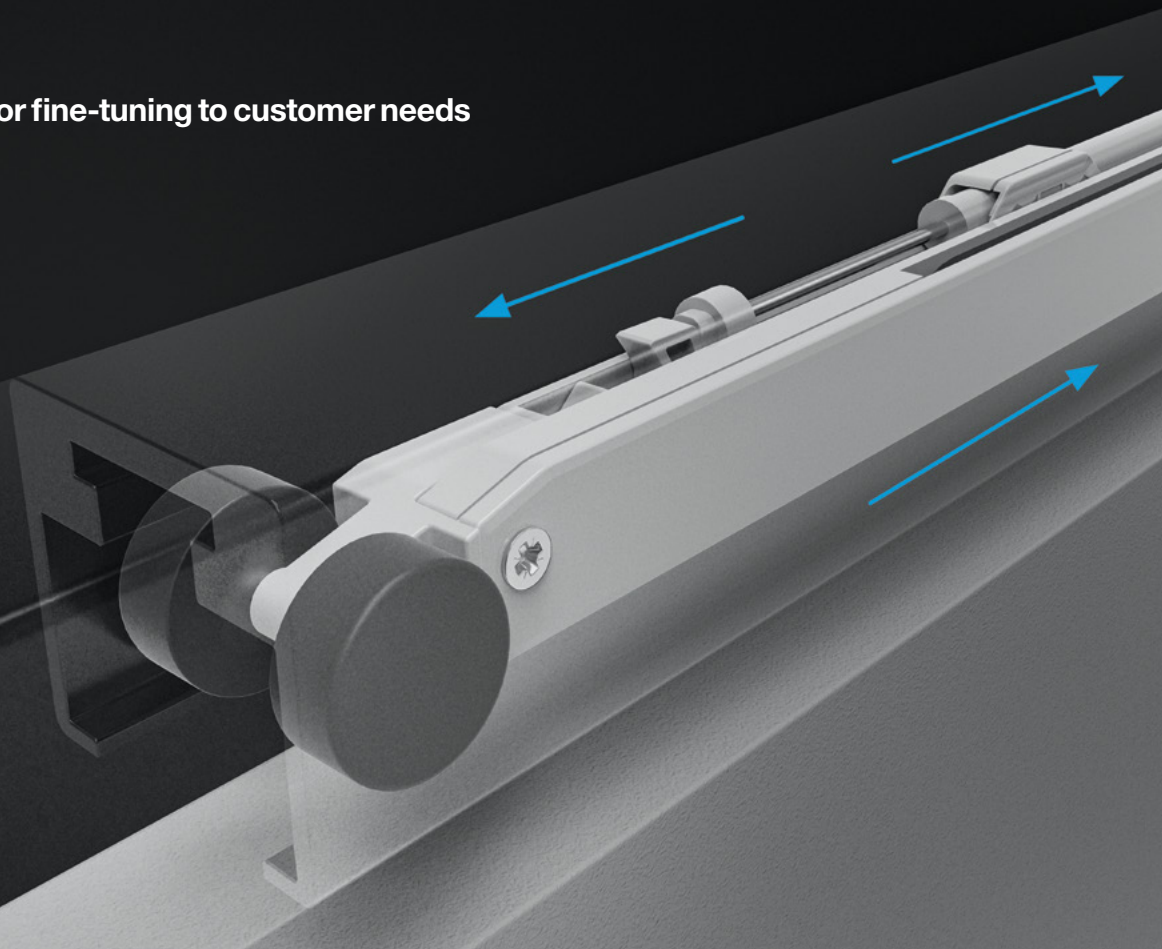

A light push to activate

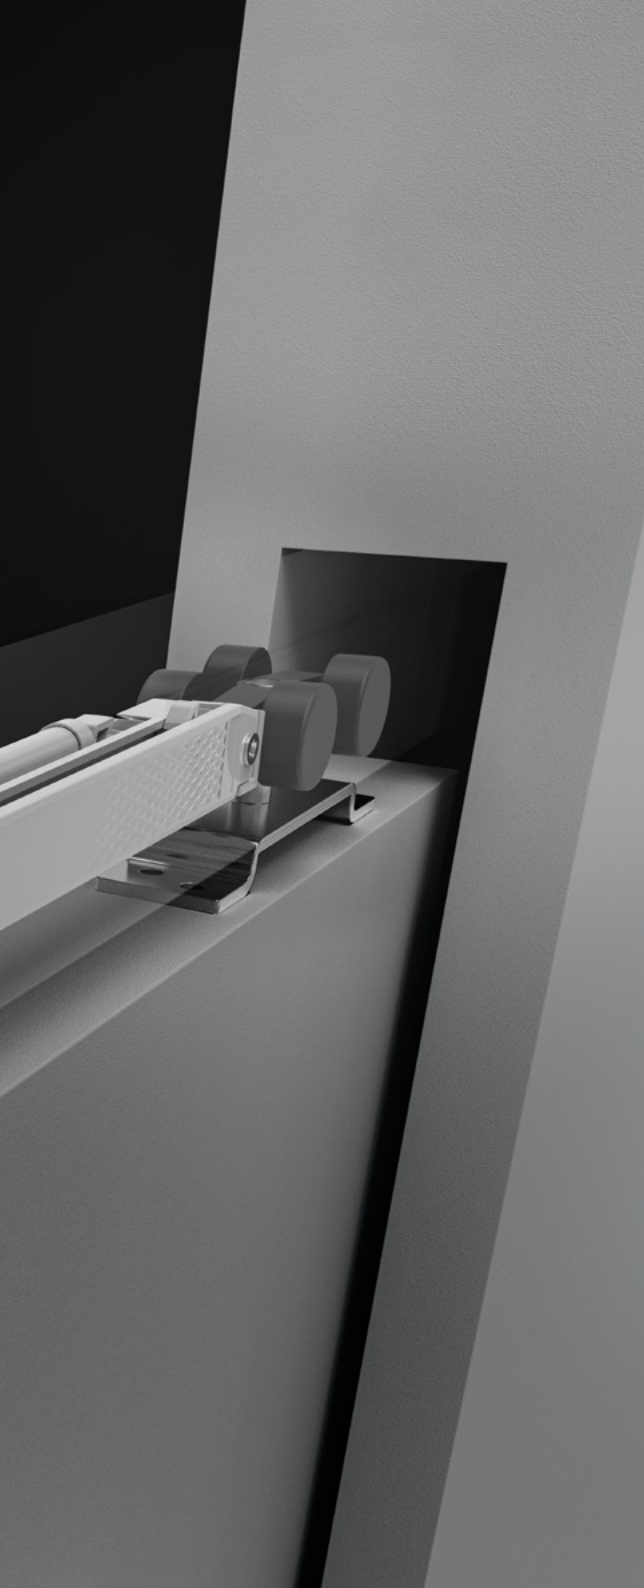

Smooth and reliable damping

Ready for fine-tuning to customer needs

Engineered for comfortable usage of pocket doors

PushDuo and PushTrio solutions

Discover our range of pocket door systems for smooth and quiet door operation. **PushDuo** is a standard pocket door system featuring push-to-open soft-closing function. **PushTrio** is an advanced version that combines a three-in-one solution: push-to-open, soft opening, and soft closing. By seamlessly integrating these three functions, PushTrio provides a single solution for all scenarios.

Elevating user comfort

The soft opening and self-closing ensure smooth and controlled door operation, while the push-to-open function enhances convenience for effortless everyday use.

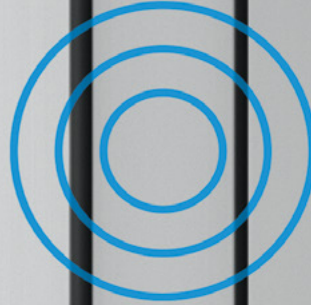

Modular design for maximum flexibility

Both systems feature a modular design engineered for maximum flexibility and compatibility with various railing systems for pocket and sliding doors. The modular concept allows the system to be precisely configured to meet specific application requirements and customer needs.

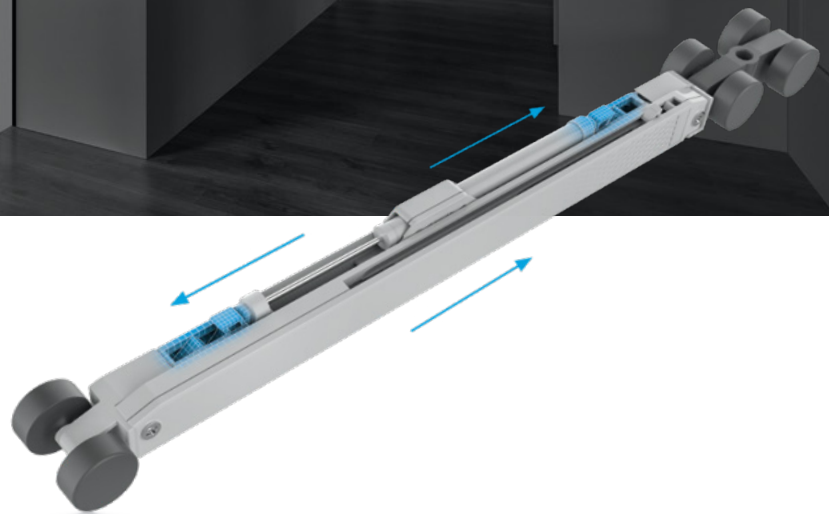

Fully retractable pocket sliding doors

- Maximise available space by allowing the doors to retract fully into the wall pocket, creating a clean, flush finish
- Zero protrusion optimises the clear passage area and provides unobstructed access when the doors are fully open

A light push to activate

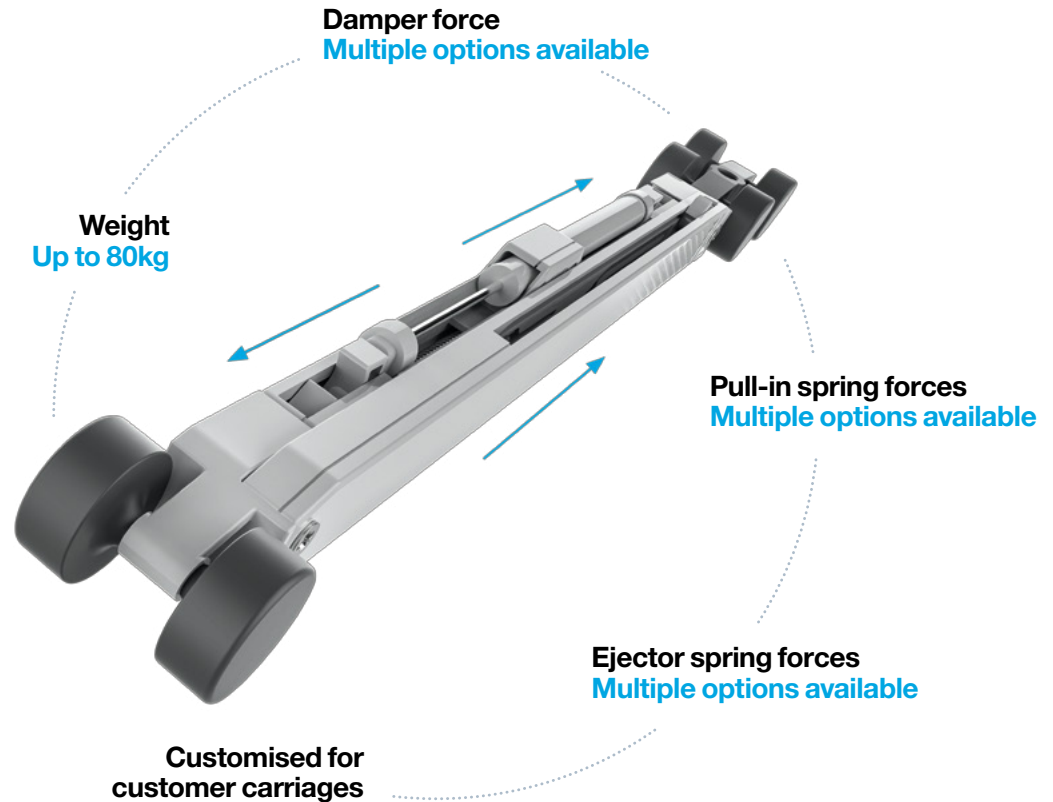

- Push-to-open mechanism activated with just 0.5 mm of movement for effortless opening
- Doors eject for min. 80mm, providing comfortable access for manual closing

Smooth and reliable damping

- Titus damper inside provides quiet and smooth door operation
- Consistent damping performance in the opening and closing directions
- Smooth, controlled opening and closing for doors of various sizes and weights

Ready for fine-tuning to customer needs

- Modular design allows for efficient fine-tuning of performance characteristics
- Adaptable through minor modifications and the use of standard components
- Designed for various pocket door applications
